

Attenda

Attenda® Sleigh Bed

The Attenda Solution

Does your critical environment demand a specialized solution for sleep surfaces? The new Attenda® Sleigh Bed is designed and engineered to solve problems associated with standard beds. The Sleigh Bed addresses geriatric, incontinence and patient safety issues – in a contemporary, residential design.

Patents pending.

Safe, Secure...and Built to Last

The key to Attenda's strength and durability is its advanced one-piece construction. Other furniture is assembled with component parts consisting of wood and metal, with easily removed fasteners. Attenda products are designed for intensive-use applications in critical environments. Molded in specially formulated, high-impact, fire-retardant polyethylene, the bed is then filled with rigid structural foam for increased durability and sound absorption.

Key features and benefits:

- Contemporary "sleigh-style" design for a more residential, normalized look.
- Seamless, one-piece construction for maximum safety and security.
- Non-absorbent, hard-shell exterior skin is easy to clean.
- Raised sleep surface 18" from floor. Ample clearance for most patient lift devices.
- Tested to hold a 1,000 lb. static load.

Also available in a lower height version, sleep surface 13" from floor

Includes non-removable, nylon-bottom leveler glides as standard. Bolt-down option.

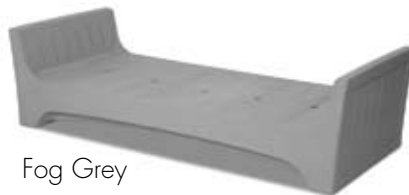

Ideal for incontinent patients – optional drain holes allow fluids to drain away.

An Attenda Product for Every Need

The Attenda® Series includes a
product for every residential need.
