Series

# Beam Seating

## Series

What kind of lobby or waiting area do you think gets the most abuse?

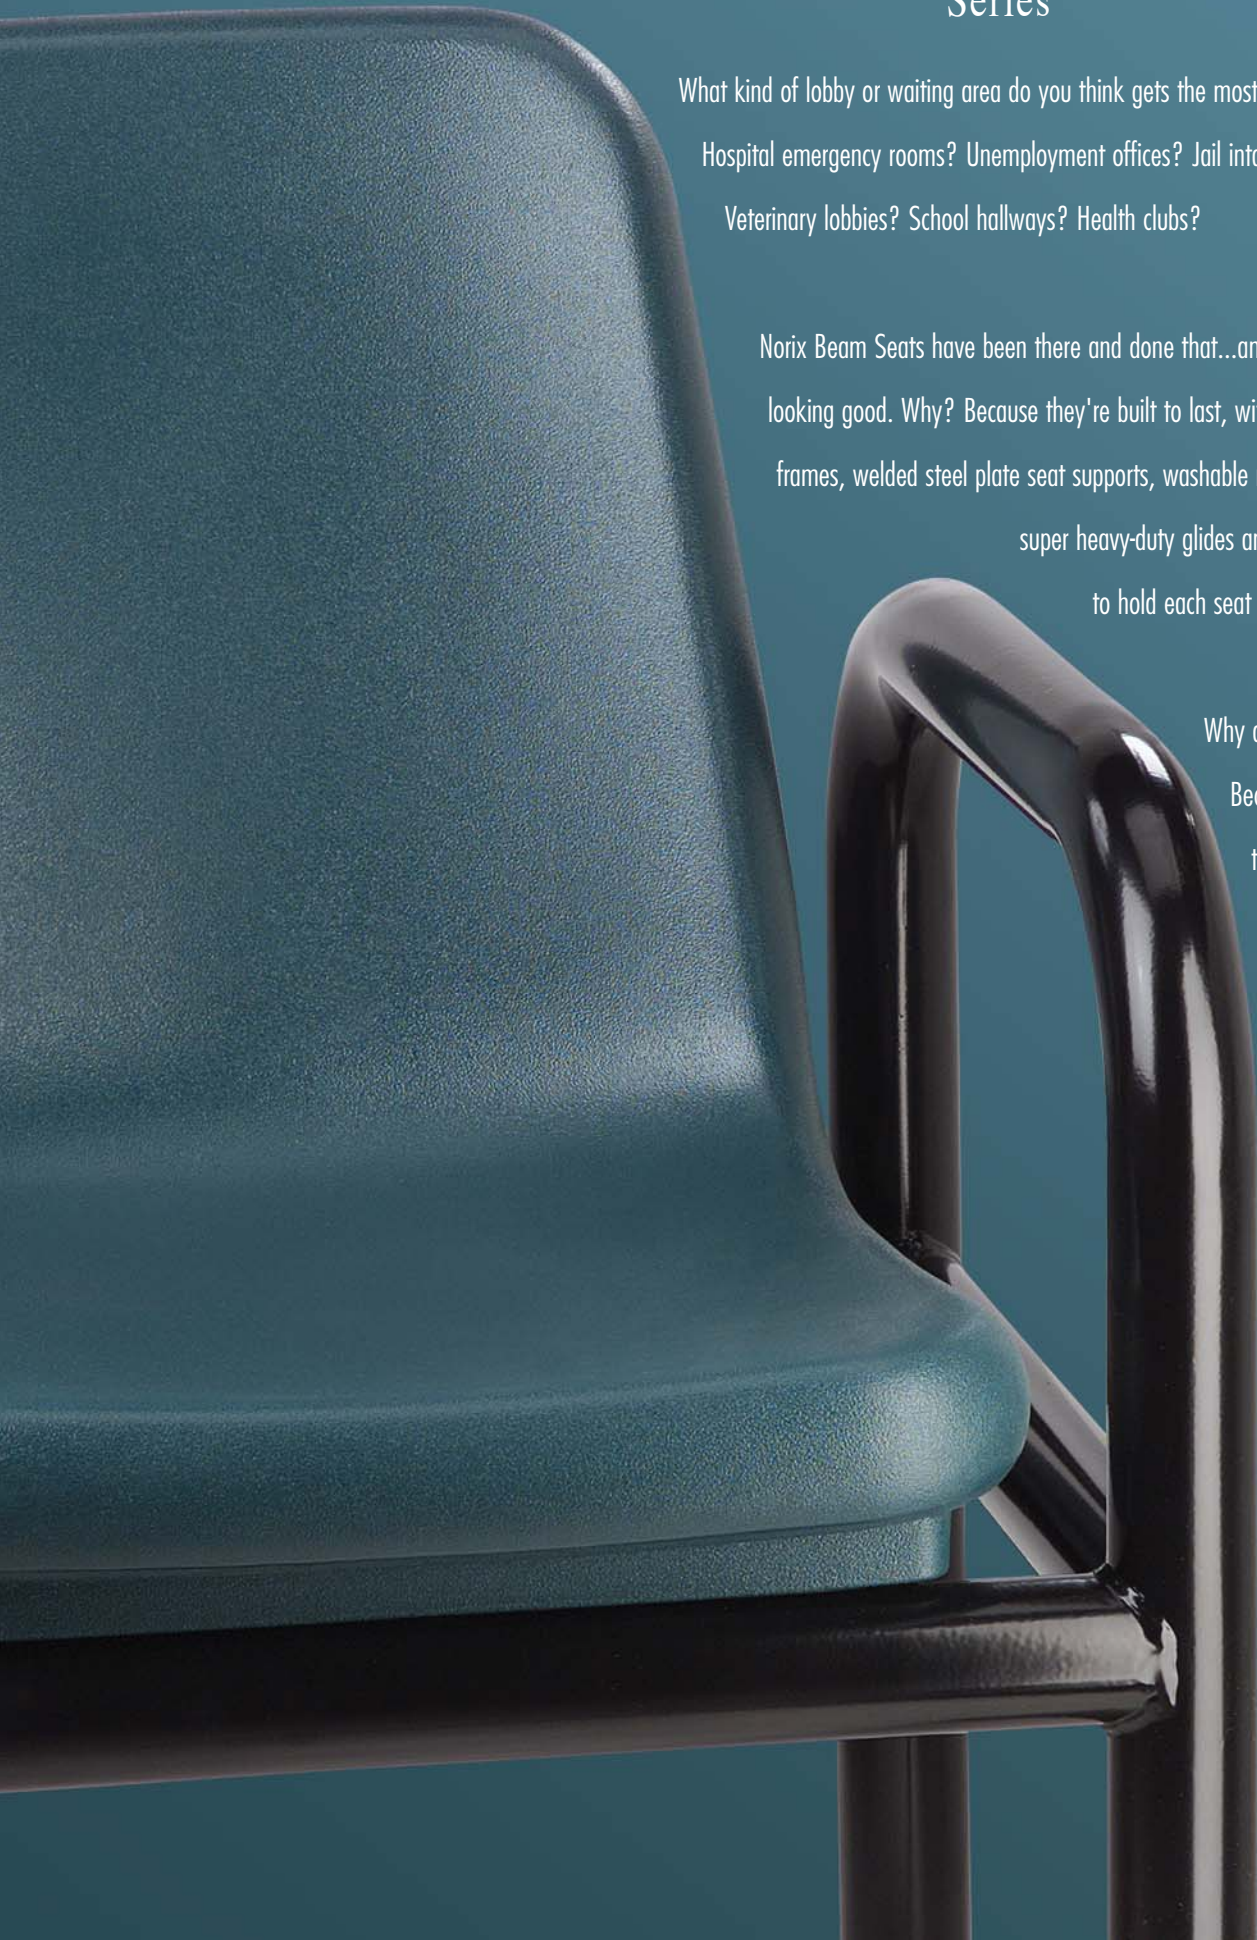

Hospital emergency rooms? Unemployment offices? Jail intake areas?

Veterinary lobbies? School hallways? Health clubs?

Norix Beam Seats have been there and done that...and are still going strong and looking good. Why? Because they're built to last, with powder coated tube steel frames, welded steel plate seat supports, washable molded polyethylene seats, super heavy-duty glides and 9 tamper-resistant screws to hold each seat in place.

Why do we build them so tough?

Because other than washing them down with soap and water, you shouldn't ever have to think about them again.

### SAFETY AND COMFORT

With or without divider arms, the individually molded seats define a single seating area and deter people from using them as a lounge chair or couch.

Rotationally molded from specially formulated fire-retardant high-impact polyethylene, the seats are unaffected by most chemicals and cleaning solutions. Choose seat colors from slate blue, buff, fog grey, blue grey, plum or teal with standard black powder coat frames.

### INSTITUTIONAL TOUGH

2" diameter

14 gauge steel

tube creates the framework for

this "defined-space" seating. Full circumference welds at every joint and no nuts, bolts or rivets to loosen or fall apart. Each seat has molded-in threaded inserts and is attached with nine security screws to an 11 gauge steel seat support.

### ADAPTABLE

The frames are available with

heavy-duty adjustable

glides or with bolt-down tabs. Specify up

to five abreast seats, then attach a corner table to design

"L" or "U" shapes.

Using end tables, corner tables or intermediate table tops in place of a seat allows you to create all types of configurations to fit any size seating area. Or, simply tell us your seating requirements and room dimensions and we'll provide a layout for you.
